Report of the Event

Title of the Event: Workshop on “Mobile Application Development on Android” through TASK

Organized Date: 7th December 2017, MGIT, Hyderabad

Faculty: Dr. N V Ganapathi Raju

Summary:

Mobile application development is similar to [Web application](#) development and has its roots in more traditional software development. One critical difference, however, is that mobile applications (apps) are often written specifically to take advantage of the unique features a particular mobile device offers. For instance, a gaming app might be written to take advantage of the iPhone's accelerometer.
